

# C-PILLAR PARTITION MERCEDES VITO DUALINER

Snoeks Automotive B.V., the Van-conversion specialist for Europe, developed a C-pillar bulkhead for the Mercedes Vito Dualiner.

## PRODUCT

The partition is made of high-strength ABS-plastic and is available for both Standard and Comfort versions. The wall is non-removable and designed to meet the looks and colours of the base vehicle. The contour follows the shape of the rearbench very close which leaves the maximum loadspace possible.

## SAFETY

When fitted in accordance with the instructions, the bulkhead meets the highest standards for safety in Europe. It is tested for protection against shifting load and is in accordance with German and Swedish safety-legislation. The window is in accordance with the European R43 legislation. It is a security that you move your passengers in the safest way.

## COMFORT

By adding the wall, a complete separation of goods and passengers is realized. As a result dust and odours stay where they are. It also reduces the noise of the load compartment, giving you a lower noise level for the driver and his passengers. By reducing the passengers compartment the volume that needs to be heated or cooled is smaller. Both heating and airconditioning system give improved operation.
